

iXv Visualizer 7

WEB-BASED VISUALIZATION

iXv Visualizer 7, part of the i2 Intelligence-Led Operations Platform, gives organizations the ability to integrate i2 visualization technology into their existing data source infrastructure.

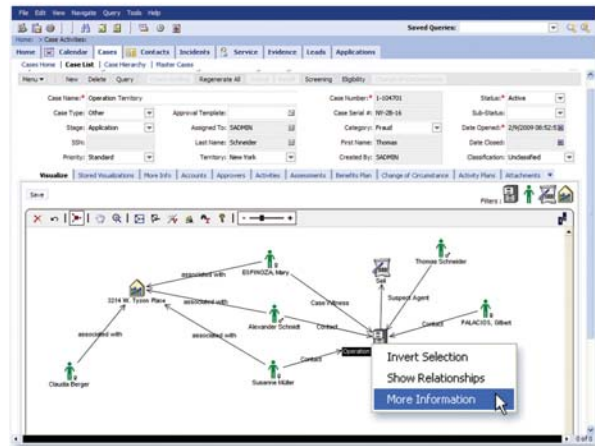

Many organizations now provide Web-enabled interfaces to their data. Typically, the core data is returned in text-based reports which are time consuming to process. Using *iXv Visualizer 7 Software Development Kit*, organizations can connect visualization technology to data sources, enabling users to visualize this data using the *iXv Visualizer 7*.

The *iXv Visualizer 7* enables users to instantly visualize data in a chart format which depicts entities of interest and the connections between them. In this intuitive format, users can more easily navigate data and quickly see and explore relationships that might be overlooked in text-based or tabular reports. The visualization can also be transferred to *i2 Analyst's Notebook* for advanced analysis or for combining with existing charts in an investigation.

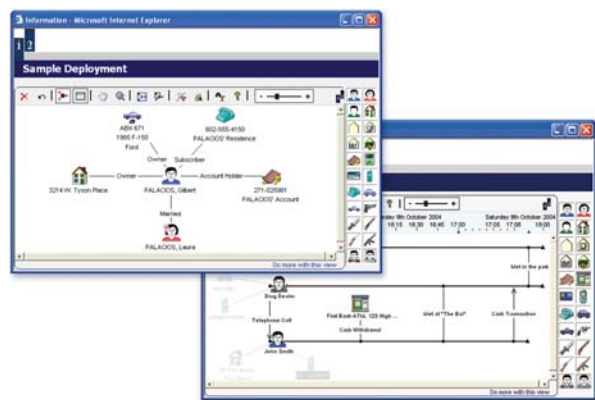

When organizations add *iXv* technology to their data sources, users can more efficiently and effectively process information. This increases overall productivity and the value of existing data sources.

Enable more users to visualize your data

- Share information instantly
- Web-based technology gives more of your organization the ability to visualize your data
- Drag and drop to *Analyst's Notebook* product family enables collaboration with analytical users

The graphical presentation quickly reveals relationships and allows convenient access to supporting data

The *iXv Visualizer 7* can show association and timeline charts

Share information instantly.

Make sense of results quickly

- Simple intuitive navigation reduces the need for end-user training
- Visual format allows relationships, trends and connections in the data to be discovered instantly
- Rapid data interpretation enables users to analyze more data than they could in a text format and speeds up the decision making process

Analyze in more detail using Analyst's Notebook

- Integration with Analyst's Notebook product family
- Carry out further detailed analysis in the de facto standard analysis tool
- Combine data from iXv Visualizer 7 charts with existing Analyst's Notebook charts in an investigation and work with analytical users within the wider organization and beyond

Seamless integration with existing business tools

- Give data sources visualization capabilities with minimal resources or requirements
- Integrate with existing business logic so mechanisms such as search and login remain intact
- iXv technology is platform and operating system independent and can leverage existing in-house expertise and resources

Using the rich XML schema and powerful visualization API available through the iXv SDK, you can customize the iXv technology to suit the audience of your data source

iXv Visualizer 7 Key Capabilities

- Platform and operating system independent – iXv technology has been designed to be server platform, operating system and Web server independent. This means your current investments in hardware and operating systems are unaffected.
- iXv Visualizer 7 Client for browser-based access – the iXv Visualizer 7 leverages Java™ technology and can be embedded in a Web page and made available to thousands of users instantly. It has been designed to consume XML outputs transformed from existing business systems.
- iXv Visualizer 7 Software Development Kit (SDK) empowers organizations to extend existing applications and Web sites without requiring changes to existing business logic.
